WHERE IT GOES
This part in colour, its neighbours in grey

HOW TO MAKE IT AND HOW IT FITS

Make three. Saw 40 mm lengths of 35 x 12 mm aluminium bar.

Cut a 120 degree V the full 40 mm length of one 40 x 35 face:
27.7 mm wide at the face, 8 mm deep, centred. Saw just inside the scribed lines and file to them; 4 mm of solid stays above the point of the V.

Drill 4.2 mm and tap M5, 8 mm deep, in the flat top face, on the centre line, 8 mm from each end (24 mm apart).

Glue a 1.5 mm strip of rubber sheet into the V, both faces.

Fit: the V sits on the down tube, the tray on its flat top; two M5 countersunk screws down through the tray hold it.

Tubes of 28 to 32 mm seat on both faces of the V.

Check: on a 32 mm tube it does not rock, and the tube does not touch the bottom of the V.

SunSpoke V-saddle (make 3): making sketch
