WHERE IT GOES

This part in colour, its neighbours in grey

HOW TO MAKE IT AND HOW IT FITS

Make two. Cut 336 mm lengths of 12 x 10 mm HDPE bar.

Chamfer the top edges of both ends 2 x 45 degrees so the pack slides on without catching.

Fit: each strip lies on the tray along one edge, its outer face in line with the pack's side (35 to 45 mm from the centre line), starting 2 mm from the end stop.

Fix with three 4 mm countersunk self-tapping screws for plastic, up from under the tray, 10 mm deep, 120 mm apart.

The pack's back face slides on the two strips, 12 mm above the tray, so its latch clears the tray.

Check: screw heads below the tray's under face; strips straight.
