WHERE IT GOES

This part in colour, its neighbours in grey

HOW TO MAKE IT AND HOW IT FITS

Cut a 50 mm length of 10 x 6 mm steel flat bar; deburr.
Drill 3.3 mm and tap M4, 6 mm deep (through), 10 mm from each end on the centre line (30 mm apart).
Paint or zinc spray it against rust.
Fit: lies flat on the tray across the centre line, its lower edge 140 mm above the middle of the tray (toward the head tube); two M4 countersunk screws up from under the tray.
The pack's spring latch drops in behind it: with the pack against the end stop the latch sits 3 mm short of the bar.
Check: it stands 6 mm proud of the tray and is square across.
