WHERE IT GOES

This part in colour, its neighbours in grey

HOW TO MAKE IT AND HOW IT FITS

Cut a plate 94 mm long x 25 mm tall with a 26 mm long, 16 mm tall tab on its left end (top corner); fold the tab 90 degrees toward the pack side: this is the flange that lies against the outside of the latch ear and carries the keeper.

Drill: two 4.5 mm holes for the hinge leaf, 18 mm each side of the centre of the plate, 10 mm up; two 3.5 mm in the flange for the keeper's rivets, 4 and 8 mm from its end, 8 mm up.

Glue a 3 mm rubber pad, 80 x 16 mm, on the pack face, 8 mm up.

Fit: the hinge holds its lower edge 6 mm above the tray; closed, the pad presses the pack's top end below the handle.

Folded down, it lies flat under the pack's path.

Check: it folds through 90 degrees without touching the pack.
